

AI Sales Forecasting Dashboard

This project is a Flask-based sales forecasting dashboard developed in Python. It provides interactive analytics and machine learning-based sales forecasting using Prophet.

Features

- Interactive dashboard with filters for year, category, region and customer.
- KPI cards for sales, profit and orders.
- Charts using Plotly.
- Sales forecasting using Prophet.
- Modular Flask blueprints and responsive UI.

Tech Stack

Python, Flask, Pandas, Plotly, Prophet, HTML, CSS, Git & GitHub.

Project Structure

app.py, routes/, templates/, static/, model/, forecasting.py, config.py and dataset/.

Outcome

The application enables business users to analyze historical sales, explore trends, and generate future sales forecasts for better decision-making.
